### Presentation
- Canalis KBA 88

### Description
- Canalis KBA, 25 and 40 A 92
- KBL Industrial luminaires 95
- Tap-off units 96

### Catalogue numbers / Dimensions
- Canalis KBA, 25 and 40 A 98
- KBL Industrial luminaires 102
- Tap-off units 104

### Installation
- Installation scenario 108
- Assembly of trunking components 112
1 - Run components

- Rating: 25 or 40 A
- 2 or 4 live conductors
- Basic lengths: 2 and 3 metres.

2 - Feed units and end covers

The feed units delivered with the end cover receive the cables supplying one end of Canalis KBA trunking.
3 - Fixing system and cable trays
- The fixing system ensures that Canalis KBA is well secured, whatever the type of building structure. There are also fixings to secure the luminaires to Canalis KBA.
- A metal duct is available for running other circuits such as emergency lighting, low-current circuits, etc.

4 - Tap-off units
- The 10 and 16 A tap-off units pre-wired or not, offer phase selection or fixed polarities, and can be used on KDP, KDA and KBB ranges.

Luminaires
- Industrial IP20 luminaires are designed for promises of all heights
- IP55 dust and damp-proof luminaires are designed for promises of low to medium height with severe environments.
Presentation

Canalis KBA
For lighting and power socket distribution

Ready-to-install luminaires
Canalis KBL luminaires have been designed for easy installation on KBA trunking. With just a few catalogue numbers, you have a complete range of luminaires suited to all types of buildings.

No toxic emission in case of fire
All components in the KBA range are halogen free. In case of fire, Canalis KBA does not release smoke or toxic gases.

Fast and easy mounting
Canalis KBA components can be assembled in just a few clicks.
Canalis KBA
For lighting and power socket distribution

Very rigid
Canalis KBA trunking forms a rigid beam, even at the junction between two lengths.

Three levels of illumination
By using three-phase trunking, it is possible to create up to three levels of illumination.

A high degree of protection
- IP55 guarantees trunking protection against splashes and dust.
- Canalis KBA complies with sprinkler tests, guaranteeing operation under vertically and horizontally sprayed water for 50 minutes.

The high degree of protection for Canalis KBA means it can be installed in all types of buildings.
**Description**

**Canalis KBA, 25 and 40 A**

**Busbar trunking for lighting and power socket distribution**

**IP55**

**Ue = 230...400 V**

**Galvanised or RAL 9010 white**

---

**Run components**

- **Straight lengths**
  - Carry current, support and supply the luminaires.

**Straight lengths** constitute the basic structure of the line and are made up of:

1. An all-in-one carrier casing, crimp closed, forming a rigid beam made of sheet steel, hot galvanised on both sides. This casing also acts as the protective earth conductor (PE). As an option (code W), the casing is available in RAL 9001 white lacquered sheet steel.
2. A ribbon cable with two or four copper conductors, protected against corrosion by tinning.
3. One, two, three or five tap-off outlets.
4. An electrical jointing unit ensuring automatic and simultaneous connection of all live conductors.
5. A mechanical joining device made of galvanised sheet steel that makes the connection of two lengths rigid and resistant to bending.

The degree of protection is IP55 (without accessories).

The busbar trunking is non-flame-propagating as per the recommendations of standard IEC 60332-3. All the insulating and plastic materials are halogen-free and have enhanced fire-withstand capabilities (incandescent wire test as per standard IEC 60695-2):

- 960°C for components in contact with live parts.
- 650°C for other components.

---

**Feed units and end covers**

Supply a Canalis KBA line.

They clip on (jointing unit) to the end of the line.

The end cover for the opposite end of the line is supplied with each feed unit.

- **1 Feed unit, 1 circuit (25 and 40 A ratings).**
- **2 Line outlet box (for rating 40 A only).**
**Description**

**Canalis KBA, 25 and 40 A**  
Busbar trunking for lighting and power socket distribution

**Flexible lengths**

Flexible length
For changes in direction or levels and detours around obstacles.  
It is mounted in the same way as a straight length.

**Fixing systems**

**Busbar trunking**
For attachment of the busbar trunking to the structure of the building, either directly or via a threaded rod, chain or steel cable (the latter two with a pigtail hook or a closed ring).

- Designed to relieve the installer of the weight of the busbar trunking once placed in a bracket.
- Automatic locking of moving part on closing (unlocking requires a tool).
- The maximum recommended fixing distance is: 3 metres.

1. **Universal fixing bracket bracket**  
   For suspension on a threaded rod, diameter 6 mm.  
   For horizontal mounting on a beam, pendant, wall, etc.

2. **Cable suspension system**  
   Cuts mounting time of the fixing system to one-third of that required for threaded rods.  
   Enables height adjustment of the trunking.

3. **Adjustable, threaded-rod suspension system**  
   For suspension on a threaded rod, diameter 6 mm.  
   A spring system locks the threaded rod in position for fast adjustment of the trunking.

4. **Pigtail hook**  
   For suspension by a chain.

5. **Closed ring**  
   For suspension by a steel cable.

**Luminaires**
Attached to the luminaires before mounting, these fixings ensure fast and direct fixing to Canalis KBA.

- Same catalogue numbers as the busbar fixings.
- Automatic locking of moving part on closing.
- Use with an open hook and/or closed ring enables suspension.
**Description**

**Ip55**

**Ue = 230...400 V**

**Galvanised or RAL 9010 white**

---

**Canalis KBA, 25 and 40 A**

**Busbar trunking for lighting and power socket distribution**

---

**Cable support**

For running adjacent circuits such as emergency lighting, low-current circuits, etc.

1. **Cable brackets**
   - Clips to trunking for fast mounting. It is possible to run three cables (diameter 5 to 16 mm) and two IRL tubes.

2. **Cable duct**
   - The cable duct fits on support KBB 40ZFG1, which in turn fits onto a threaded rod suspension system KBA 40ZFPU. An intermediate support is placed between the duct and the trunking if the distance between the suspension points exceeds 2 metres. Each duct is equipped with a connection device.

---

**Options**

**Empty length** (no electric circuit)

Used to adjust line length to building dimensions (e.g. to reach a fixing point).

Two metres long, can be cut on site.

**Optional remote-control circuit** (code T)

Factory mounted, an SELV remote-control circuit (U 50 V) is available for the loads supplied by the KBA trunking. The main applications are:

- remote control (rest mode or testing) of self-contained emergency lighting units,
- dimmer control,
- transmission on a building automation bus (please contact us).

The system is built in compliance with CEI 60439-2 and the LV and EMC directives.

**Electrical characteristics of the remote-control circuit**

<table>
<thead>
<tr>
<th>Composition</th>
<th>Twisted pair, unshielded (10 twists/m)</th>
</tr>
</thead>
<tbody>

</tr>
<tr>
<td>2 x 0.75 copper</td>
<td>52 mΩ/m</td>
</tr>
<tr>
<td>Linear capacitance</td>
<td>30 pF/m</td>
</tr>
</tbody>
</table>

1. The remote-control circuit is factory mounted next to the main circuit in the trunking (in front for two-circuit trunking).
2. Electrical joining unit equipped with additional bus contacts. Installation of components fitted with option T requires no additional assembly operations.
3. Each tap-off outlet is equipped with dual output contacts to tap-off the remote-control circuit to the receiver.
4. Connection of the remote-control receiver using a KBC-16DCB or DCF tap-off unit equipped with a KBC 16ZT1 contact-block accessory.
5. Feed units equipped with an additional bus terminal block.
Description

KBL Industrial luminaires
For Canalis KBA

Ue = 230...400 V
RAL 9010 white

IP20 industrial luminaires

IP20 industrial fluorescent luminaires
Industrial fluorescent luminaires are designed for industrial buildings of low to medium height. They are supplied:
- pre-mounted,
- prewired with a KBC 10DCB20 tap-off unit and one metre of SO5Z1Z1-F 3G1.5 cable,
- pre-equipped with two KBA 40ZFU fixings.

Supplied without tubes, the run components are made up of:
1 a sheet-steel body, electro-galvanised and pre-lacquered white,
2 a ballast:
   - for T8 tubes (diameter 26 mm):
     - either two 58 W compensated (C) ferro-magnetic ballasts,
     - or an electronic ballast (HF), dual 2 x 58 W version,
   - for T5 tubes (diameter 16 mm), an electronic ballast, dual 2 x 35 W version
3 industrial fluorescent reflectors made of sheet metal, electro-galvanised and pre-lacquered white for industrial buildings of low to medium height.

IP20 high-intensity fluorescent luminaires

High-intensity industrial fluorescent luminaires are designed for industrial buildings with high ceilings. They may be equipped exclusively with 80 W T5 tubes (diameter 16 mm) and an electronic ballast (HF), dual 2 x 80 W version.

IP55 dust and damp-proof luminaires

These industrial fluorescent luminaires are designed for industrial buildings of low to medium height with severe environments (dust, humidity, etc.), farm buildings, parking lots, sawmills, etc. The combination of polyester and polycarbonate makes them particularly versatile.
They are supplied:
- pre-mounted,
- prewired with a KBC 10DCB20 tap-off unit and one metre of SO5Z1Z1-F 3G1.5 cable,
- pre-equipped with two KBA 40ZFU fixings.

Supplied without tubes, the run components are made up of:
1 a body made of polyester, RAL 7025 grey,
2 a cover made of striated polycarbonate,
3 cover clips made of stainless steel,
4 a ballast:
   - for T8 tubes:
     - either two compensated (C) ferro-magnetic ballasts,
     - or an electronic ballast (HF), dual 2 x 58 W version,
   - for T5 tubes, an electronic ballast, dual 2 x 35 W version.
Description

Canalis KDP, KBA and KBB
Busbar trunking for lighting and power socket distribution
Tap-off units

Tap-off units (general)
For instantaneous connection of luminaires to KDP busbar trunking:
- they can be handled while energised and under live conditions,
- the contacts for live conductors are of the clamp type,
- PE connection occurs before that of the phases and neutral,
- phase-selection system (clip-in contact studs) for balancing of 3-phase distribution systems,
- selection is visible via a transparent window,
- a coloured lock holds them in the tap-off outlet,
- all the insulating and plastic materials have a high fire-retardant capacity:
  - incandescent-wire test in compliance with IEC 60695-2:
    - 960°C for components in contact with live parts,
    - 650°C for other components.

All the insulators and plastic components are halogen free.

Pre-wired 10 A tap-off unit with fixed polarity
Pre-wired with SOSZ1Z1-F 3 x 1.5 mm² cable, 0.80 m long, pre-stripped on luminaire end:
- 10 A rating,
- fixed L + N + PE polarity,
- the various models make it possible to balance 3-phase distribution systems.

The colour of the lock and the casing enable remote identification of the polarity:
1 Live-conductor contacts.
2 Protective-conductor contact.
3 Lock.

Two-pole 10 A tap-off unit with phase selection
- The two contact studs are movable and can be used to set up both L + N + PE and 2L + PE distribution.
- Supplied complete with a cable gland.

10 A KBC-10DCB20 tap-off unit, 2-pole + PE, to be wired
- To be wired for connection of luminaires using a cable of specific type, size or length.
- Fast connection for 3 x 0.75 to 1.5 mm² cable. If prefabricated leads are used, the line must have 16 A protection (see possibilities of dispensing with protection in the simplified design guide for lighting distribution, in the section on protection against overloads).

10 A KBC tap-off unit, 2-pole + PE, pre-wired
Two pre-wired versions are available:
1 pre-wired with SOSZ1Z1-F 3 x 1.5 mm² cable, 1 m long, pre-stripped on luminaire end,
2 for KDP, pre-wired with SOSZ1Z1-F 3 x 1.5 mm² cable, 1 m long and equipped with a female GST18i3 connector on the luminaire end (see prefabricated leads). In this case, the lead is IP40.

If prefabricated leads are used, the line must have 16 A protection (see possibilities of dispensing with protection in the simplified design guide for lighting distribution, in the section on protection against overloads).
Canalis KDP, KBA and KBB
Busbar trunking for lighting and power socket distribution
Tap-off units

**Description**

**IP55**
**Ue = 230...400 V**

**16 A KBC 16DCB/DCF21 tap-off unit with phase selection**
For connection of luminaires using a cable of specific type, size and length.

- Two-pole: L + N + PE (1 mobile stud, fixed neutral) or 2L + PE (2 mobile studs).
- Installation is facilitated by the side guides.
- Supplied with a cable bushing. Terminal connections for 0.75 to 1.5 mm² cable.

**KBC 16DCB tap-off unit with terminals, direct connection (no protection)**
For direct connection (no protection) of luminaires using a specific cable. Can be equipped with the accessory to tap-off the remote-control circuit to the luminaires.

**KBC 16DCF tap-off unit, with fuses**
For protection of each luminaire.
Fuse carrier on the phase (1 or 2 carriers depending on the model).
For cylindrical fuse NF 8.5 x 31.5 (not supplied), 16 A gG maximum, breaking capacity 20 kA.

**16 A L + N + PE tap-off unit with preselected polarity**
**KBC 16DCB/DCF6**
For tap-off and individual protection of luminaires assigned to two independent circuits of 4-conductor KBA trunking.
Identical in design to the tap-off units on the opposite page, but with factory-set polarity.

**Accessories**

Specific to KBC 16DCF tap-off units

1. **Additional remote-control contact block**
   - For tap-off of the remote-control circuit to the luminaire (KBA and KBB lines with T option).
   - Clips onto KBC 16DCB or CF (except KBC 16DCF22) tap-off units.
   - Terminals for data cable, max. size 2 X 0.75 mm².
   - Supplied with cable bushing.

2. **Rear support bracket**
   Additional fixing of KBC 16 tap-off units using the rear support bracket may be necessary, notably if there is a risk of accidental pulling on the cable or if the cable is very heavy (great length).

Other accessories

3. **Interlocking device**
   For all 10 A and 16 A tap-off units.
   A set of three interlocking devices in different colours can be used to mechanically lock out tap-off units when two or three different distribution networks are present (load, voltage, frequency, etc.).
   - An interlocking device is made up of a handle and an interlocking device on each end. It can be used for a tap-off outlet and the corresponding tap-off unit.
   - Labels can be placed on the tap-off units and the trunking for remote identification.

4. **Outlet blanking plate**
   Spare part intended to restore IP55 on a tap-off outlet following removal of the tap-off unit (if original blanking plate is lost).

**Installation**

**Canalis KBA, 25 and 40 A**
Busbar trunking for lighting and power socket distribution
Installation scenario

**Installation of a line**

Unload and carry the products inside to an area where they are not exposed to dust or inclement weather.

**Do not store the busbar trunking outdoors.**

Unpack and layout on the floor the trunking components required to mount the line. Make sure that the feed unit is on the end closest to the switchboard.

**Preparation of fixings**

Install the suspension cable around the I-beam and mount the adjustment fixture on the KBA bracket.

*In this catalogue, you will find a number of fixings suited to different building structures. You will also find a range of accessories to support all the cables associated with your installation.*
**Installation**

**Canalis KBA, 25 and 40 A**
Busbar trunking for lighting and power socket distribution

**Installation scenario**

**IP55**

**Ue = 230...400 V**

**Galvanised or RAL 9010 white**

---

**Preparation of a line segment on the floor**

Assemble two or three lengths (clip together) and lock with the joint screw.

Position the line segment in the fixing brackets. They are designed to immediately relieve the installer of the weight. The busbar trunking is held in place as soon as the KBA lengths are positioned in the brackets.

The brackets lock when clipped closed.
Installation

IP55
Ue = 230...400 V
Galvanised or RAL 9010 white

The following segments can be mounted effortlessly, due to the ease of assembling the mechanical and electrical connections.

Adjusting the level of the KBA line

The suspension system using a steel cable makes for easy and fast adjustments.

Tap-off connections

Preparation of the luminaires

Connection of the tap-off units to the luminaires, phase selection and mounting of the fixings are carried out on the ground.
These operations can also be carried out in the workshop, before delivery to the site.

In this catalogue, you will find ready-to-use luminaires. They are supplied prewired, equipped with a tap-off unit with phase-selection.
Installation

Canalis KBA, 25 and 40 A
Busbar trunking for lighting and power socket distribution
Installation scenario

Mounting the luminaires on the trunking

Once again, the fixing brackets are designed to immediately relieve the installer of the weight. The luminaire is held in place as soon as the bracket is placed on the trunking.

The brackets lock when clipped closed.

Connect the tap-off unit to the trunking

Connect the feed unit and energise

Last installation step.
Connect the supply cable to the Canalis KBA feed unit, then to the switchboard.

Energise the system to check operation.
Installation

**Canalis KBB**
for lighting and power socket distribution

---

**1 - Run components**

- Rating: 25 or 40 A.
- 2 or 4 live conductors.
- Length:
- Basic lengths: 2 and 3 metres.

**2 - Feed units and end covers**

- The feed units delivered with end covers, receive the cables supplying one end of Canalis KBB trunking.
- The end covers supplied with the feed units terminate the signal length and insure the IP level.
Canalis KBB for lighting and power socket distribution

3 - Fixing system and cable trays

- The fixing system ensures that Canalis KBB is well secured, whatever the type of building structure. There are also fixings to secure the luminaires to Canalis KBB.
- A metal duct is available for running other circuits such as emergency lighting, low-current circuits, etc.

4 - Tap-off units

- The 10 and 16 A tap-off units, pre-wired or not, single-phase with fixed polarity or multi-phase with phase selection, can be used on the entire lighting range.
Canalis KBB
for lighting and power socket distribution

**No toxic emission in case of fire**
All components in the KBB range are **halogen free**.
In case of fire, Canalis KBB does not release smoke or toxic gases.

**A large number of conductors**
Canalis KBB offers up to 11 conductors for all applications:
- emergency lighting,
- dimmers,
- detection of presence,
lighting and power-socket circuits, etc.
Canalis KBB for lighting and power socket distribution

A high degree of protection
- IP55 guarantees trunking protection against splashes and dust.
- Canalis KBB complies with sprinkler tests, guaranteeing operation under vertically and horizontally sprayed water for 50 minutes.

The high degree of protection for Canalis KBB means it can be installed in all types of buildings.

Very rigid
Canalis KBB offers fixing distances of up to 5 metres, including the jointing units.

Unmatched upgrading possibilities
It is particularly simple to add or modify a Canalis KBB installation since components can be easily mounted or dismantled.
All parts can be reused.
Canalis KBB, 25 and 40 A
Busbar trunking for lighting and power socket distribution

Description

IP55
Ue = 230...400 V
Galvanised or RAL 9010 white

Run components

Carry current, support and supply the luminaires.
Particularly strong, Canalis KBB is specially intended for installations with large fixing distances and/or heavy or numerous luminaires.

Straight lengths

Straight lengths constitute the basic structure of the line and are made up of:
1. an all-in-one carrier casing, crimp closed, forming a rigid beam made of sheet steel, hot galvanised on both sides. This casing also acts as the protective earth conductor (PE). As an option (code W), the casing is available in RAL 9010 white lacquered sheet steel,
2. one or two ribbon cable with two or four copper conductors, protected against corrosion by tinning, making up one or two independent circuits,
3. three tap-off outlets maxi spaced every metre on the main circuit (front), two tap-off outlets maxi on the adjacent circuit (rear),
4. an electrical joint unit ensuring automatic and simultaneous connection of all live conductors,
5. a mechanical joint device in two parts, made of stamped sheet steel, that makes the connection of two lengths rigid and resistant to bending.

Multi-circuit possibilities

The many possibilities offered by KBB trunking means specialised circuits can be created, e.g. for emergency lighting, presence detection, dimming.

The degree of protection is IP55 (without accessories).

The busbar trunking is non-flame-propagating as per the recommendations of standard IEC 60332-3. All the insulating and plastic materials are halogen-free and have enhanced fire-withstand capabilities (incandescent wire test as per standard IEC 60695-2):
- 960°C for components in contact with live parts.
- 650°C for other components.
**Description**

**Canalis KBB, 25 and 40 A**  
Busbar trunking for lighting and power socket distribution

**IP55**  
**Ue = 230...400 V**  
Galvanised or RAL 9010 white

---

**Feed units and end covers**
Supply a Canalis KBB line. They clip on (jointing unit) to the end of the line.

The end cover for the opposite end of the line is supplied with each feed unit.

1. Feed unit, one circuit  
2. Feed unit, two circuits  
3. End cover.

---

**Flexible lengths**

Flexible length  
For changes in direction or levels and detours around obstacles.  
It is mounted in the same way as a straight length.
Description

Canalis KBB, 25 and 40 A
Busbar trunking for lighting and power socket distribution

**Description**

*IP55*

*Ue = 230...400 V*

*Galvanised or RAL 9010 white*

**Fixing systems**

*Busbar trunking*

For attachment of the busbar trunking to the structure of the building, either directly or via a threaded rod, chain or steel cable.

- Designed to relieve the installer of the weight of the busbar trunking once placed in a bracket.
- Automatic locking of moving part on closing (unlocking requires a 3 mm flat screwdriver).
- The maximum recommended fixing distance is five metres.

1. **Universal fixing bracket**
   - For suspension on a threaded rod, diameter 6 mm.
   - For horizontal mounting on a beam, pendant, wall, etc.

2. **Cable suspension system**
   - Cuts the mounting time of the fixing system to one-third of that required for threaded rods.
   - Enables adjustment of the height of the trunking.

3. **Adjustable threaded-rod suspension system**
   - For suspension on a threaded rod, diameter 6 mm.
   - A spring system locks the threaded rod in position for fast adjustment of the trunking.

4. **Pigtail hook**
   - For suspension by a chain.

**Luminaires**

Attached to the luminaires before mounting, these fixings ensure fast and direct fixing to Canalis KBB.

- Fixing systems with automatic locking of moving part on closing.
- To be completed according to the luminaire with suspension accessories (open hook, closed ring...)

**Cable support**

For running adjacent circuits such as emergency lighting, low-current circuits, etc.

**Cable brackets**

Clips to trunking for fast mounting. It is possible to run three cables (diameter 5 to 16 mm) and two IRL tubes.

**Cable duct**

The cable duct fits on support (1), which in turn fits onto a threaded rod suspension system (2). An intermediate support is placed between the duct and the trunking if the distance between the suspension points exceeds 2 metres.

Each duct is equipped with a mechanical joint system.
**Description**

**IP55**

**Ue = 230...400 V**

Galvanised or RAL 9010 white

---

**Options**

**Empty lengths** (no electric circuit)

Used to adjust line length to building dimensions (e.g. to reach a fixing point).

Two metres long, can be cut on site.

---

**Clean earth option** (Code E)

As an option, a factory-fitted dedicated earth conductor isolated from the grounding is available. This is known as a Clean Earth and has a cross-section of 6 mm².

1. The clean earth is always provided on the main circuit of KBB busbar trunking, on the front panel (side with label and 3 tap-offs on KBB with 2 circuits). The symbol, which appears at regular intervals near to the tap-off outlets, serves as a reminder of the special nature of this circuit.
2. The electrical jointing unit is supplied with additional clean earth contacts. Thus, installation of components fitted with option E does not require any additional assembly operation.
3. The receivers are connected using a standard 16 A (KBC 16DCB or DCF).
4. The feed boxes are fitted with clean earth (labelled ) and PE (labelled ) terminals.

---

**Optional remote-control circuit** (code T)

Factory mounted, an SELV remote-control circuit (U 50 V) is available for the loads supplied by the KBB trunking. The main applications are:

- remote control (rest mode or testing) of self-contained emergency lighting units,
- dimmer control,
- transmission on a building automation bus (please contact us).

The system is built in compliance with European standard EN 60439-2 and the LV and EMC directives.

**Electrical characteristics of the remote-control circuit**

<table>

</tbody>
</table>

1. The remote-control circuit is factory mounted next to the main circuit in the trunking (in front for two-circuit trunking).
2. Electrical jointing unit equipped with additional bus contacts. Installation of components fitted with option T requires no additional assembly operations.
3. Each tap-off outlet is equipped with dual output contacts to tap-off the remote-control circuit to the receiver.
4. Connection of the remote-control receiver using a KBC-16DCB or DCF tap-off unit equipped with a KBC 16ZT1 contact-block accessory.
5. Feed units equipped with an additional bus terminal block.
Description

IP55  
Ue = 230...400 V

Canalis KDP, KBA and KBB  
Busbar trunking for lighting and power socket distribution  
Tap-off units

Tap-off units (general)

For instantaneous connection of luminaires to KDP busbar trunking:
- they can be handled while energised and under live conditions,
- the contacts for live conductors are of the clamp type,
- PE connection occurs before that of the phases and neutral,
- phase-selection system (clip-in contact studs) for balancing of 3-phase distribution systems,
- selection is visible via a transparent window,
- a coloured lock holds them in the tap-off outlet,
- all the insulating and plastic materials have a high fire-retardant capacity:
  - incandescent-wire test in compliance with IEC 60695-2-1:
    - 960°C for components in contact with live parts,
    - 650°C for other components.

All the insulators and plastic components are halogen free.

Pre-wired 10 A tap-off unit with fixed polarity

Pre-wired with SOSZ1Z1-F 3 x 1.5 mm² cable, 0.80 m long, pre-stripped on luminaire end:
- 10 A rating,
- fixed L + N + PE polarity,
- the various models make it possible to balance 3-phase distribution systems.

The colour of the lock and the casing enable remote identification of the polarity.
1 Live-conductor contacts.
2 Protective-conductor contact.
3 Lock.

Two-pole 10 A tap-off unit with phase selection

The two contact studs are movable and can be used to set up both L + N + PE and 2L + PE distribution.
- Supplied complete with a cable gland.

10 A KBC-10DCB20 tap-off unit, 2-pole + PE, to be wired

- To be wired for connection of luminaires using a cable of specific type, size or length.
- Fast connection for 3 x 0.75 to 1.5 mm² cable. If prefabricated leads are used, the line must have 16 A protection (see possibilities of dispensing with protection in the simplified design guide for lighting distribution, in the section on protection against overloads).

10 A KBC tap-off unit, 2-pole + PE, pre-wired

Two pre-wired versions are available:
1 pre-wired with SOSZ1Z1-F 3 x 1.5 mm² cable, 1 m long, pre-stripped on luminaire end,
2 for KDP, pre-wired with SOSZ1Z1-F 3 x 1.5 mm² cable, 1 m long and equipped with a female GST18i3 connector on the luminaire end (see prefabricated leads).

In this case, the lead is IP40.

If prefabricated leads are used, the line must have 16 A protection (see possibilities of dispensing with protection in the simplified design guide for lighting distribution, in the section on protection against overloads).
Canalis KDP, KBA and KBB
Busbar trunking for lighting and power socket distribution
Tap-off units

Description

IP55
Ue = 230...400 V

16 A KBC 16DCB/DCF21 tap-off unit with phase selection
For connection of luminaires using a cable of specific type, size and length.

- Two-pole: L + N + PE (1 mobile stud, fixed neutral) or 2L + PE (2 mobile studs).
- Installation is facilitated by the side guides.
- Supplied with a cable bushing. Terminal connections for 0.75 to 1.5 mm² cable.

KBC 16DCB tap-off unit with terminals, direct connection (no protection)
For direct connection (no protection) of luminaires using a specific cable. Can be equipped with the accessory to tap-off the remote-control circuit to the luminaires.

KBC 16DCF tap-off unit, with fuses
For protection of each luminaire. Fuse carrier on the phase (1 or 2 carriers depending on the model). For cylindrical fuse NF 8.5 x 31.5 (not supplied), 16 A gG maximum, breaking capacity 20 kA.

16 A L + N + PE tap-off unit with preselected polarity
KBC 16DCB/DCF21
For tap-off and individual protection of luminaires assigned to two independent circuits of 4-conductor KBB trunking. Identical in design to the tap-off units on the opposite page, but with factory-set polarity.

Accessories
Specific to KBC 16DCF tap-off units
1. Additional remote-control contact block
   - For tap-off of the remote-control circuit to the luminaire (KBA and KBB lines with T option).
   - Clips onto KBC 16DCB or CF (except KBC 16DCF22) tap-off units.
   - Terminals for data cable, max. size 2 X 0.75 mm².
   - Supplied with cable bushing.

2. Rear support bracket
   Additional fixing of KBC 16 tap-off units using the rear support bracket may be necessary, notably if there is a risk of accidental pulling on the cable or if the cable is very heavy (great length).

Other accessories
3. Interlocking device
   For all 10 A and 16 A tap-off units.
   A set of three interlocking devices in different colours can be used to mechanically lock out tap-off units when two or three different distribution networks are present (load, voltage, frequency, etc.).
   - An interlocking device is made up of a handle and an interlocking device on each end. It can be used for a tap-off outlet and the corresponding tap-off unit.
   - Labels can be placed on the tap-off units and the trunking for remote identification.

4. Outlet blanking plate
   Spare part intended to restore IP55 on a tap-off outlet following removal of the tap-off unit (if original blanking plate is lost).
**Canalis KBB, 25 and 40 A, 1 circuit**

Busbar trunking for lighting and power socket distribution

- Optional remote-control circuit (code T)
- Optional white-lacquered metal enclosure (code W)
- Optional isolated earth (code E)

**Dimensions**

- IP55
- Ue = 230...400 V
- Galvanised or RAL 9010 white

Installation

Canalis KBB, 25 and 40 A
Busbar trunking for lighting and power socket distribution
Installation scenario

**Installation of a line**

Unload and carry the products inside to an area where no work is going on. Do not store the busbar trunking outdoors.

Take care not to knock or drag the busbar trunking on the ground. That could damage the ends and render connections impossible.

Unpack and layout on the floor the trunking components required to mount the first line.

Check the position of the feed unit. It must be as close as possible to the switchboard.

**Preparation of fixings**

Install the suspension cable around the I-beam and mount the adjustment fixture on the KBB bracket.

In this catalogue, you will find a number of fixings suited to different building structures. You will also find a range of accessories to support all the cables associated with your installation.
Preparation of a line segment on the floor

Assemble two or three lengths (clip together) and lock with the joint screw.

Lift and position the line segment in the fixing brackets.

They are designed to immediately relieve the installer of the weight. The busbar trunking is held in place as soon as the KBB lengths are positioned in the brackets.

The brackets lock when clipped closed.

To unlock the brackets, use 3 mm flat screwdriver.
Installation

Canalis KBB, 25 and 40 A
Busbar trunking for lighting and power socket distribution
Installation scenario

IP55
Ue = 230...400 V
Galvanised or RAL 9010 white

The following segments can be mounted effortlessly, due to the ease of assembling the mechanical and electrical connections.

Adjusting the level of the KBB line

The suspension system using a steel cable makes for easy and fast adjustments.

Tap-off connections

Prepare the luminaires

Connection of the tap-off units to the luminaires, phase selection and mounting of the fixings are carried out on the ground. These operations can also be carried out in the workshop, before delivery to the site.

In this catalogue, you will find ready-to-use luminaires. They are supplied prewired, equipped with a tap-off unit with phase-selection.
Installation

Canalis KBB, 25 and 40 A
Busbar trunking for lighting and power socket distribution
Installation scenario

Mounting the luminaires on the trunking
Once again, the fixing brackets are designed to immediately relieve the installer of the weight. The luminaire is held in place as soon as the bracket is placed on the trunking.

The brackets lock when clipped closed.
Connect the tap-off unit to the trunking

Connect the feed unit and energise
Last installation step.
Connect the supply cable to the Canalis KBB feed unit, then to the switchboard.

Energise the system to check operation.
